

Syntpaper SY-B

Syntpaper SY-B is a high-density polyethylene film intended for the production of labels and tags, whose main characteristics are tear, abrasion, moisture and seam resistance. It can be exposed to bad weather without losing its qualities. It has corona treatment, to receive any type of print using the appropriate ink, and with the possibility of receiving a special coat treatment for offset printing.

Printing

Flexography
Thermal transfer
(wax, mixed and resin ribbons)
Silkscreen
Rotogravure
Offset (UV drying).

Supply

Jumbo reel, rolls cut to size, and sheets with and without adhesive.

Applications

Composition labels, tags and labels for the steel industry, labels, labels for food, labels for bags, sacks.

Maximum temperature of use:

120°C degrees

Important:

The above information is derived from quality testing for reference only. The buyer must verify that the product is suitable for its intended use before starting the manufacturing or conversion process.

Note:

The material has a durability of 18 to 24 months with print quality if using resin ribbon with UV protection. Shelf life with exposure to the environment (uv rays) from 18 to 24 months and in a protected environment has indeterminate durability.

Expiration Date of the Product:

1 year after the invoice date.
